

AVerVision300p helps tell more visually than words on learning

Obchodná Akadémia is a secondary school located in Hlohovec town in Slovakia with study field of business science. This school is one of educational institutions using AVerVision300p, and applied this teaching tool in various lessons such as IT, English, Geography and Business science. They pay high attention to using this advanced technology in teaching because nowadays technology skills become increasingly important in most countries. Also, using new technology can show students that teachers take their learning seriously with concern.

The feedback of using AVerVisionV300p talks about the effectiveness and benefits in educational process. Teachers of Obchodná Akadémia School shared three sentiments in using Vision300p as follows.

- ***AVerVision300p gains attention and makes visually rich while teaching***

Teachers usually expect to teach with full attention of students. Motivation of students increases when they can see visual presentations like mind maps or flow charts. To summarize images or financial statements and so forth is best conveyed and understood in a visual way. Vision300p helps tell more substantial message in real time visually than words.

- ***Not only variety and interest but also more and higher comprehension***

Many concepts and ideas are understood visually rather than verbally. Vision300p helps teachers display the information visually, and so aids learning. It really saves time, and improves the quality of teaching and learning process. Especially for the function of image capture, it can save images of teaching materials with high capacity and then do effective visual-education.

- ***AVerVision300p is user-friendly and easy to use***

There is nothing more frustrating than to wrestle with an unfamiliar piece of equipment in the presence of a class, however, this is not the case of AVerVision300p. Even teachers without rich technology skills find it easy to use in each operation.
