

The AVerMedia Visualizer is ready to go and easy to use

Woodstock School, Mussoorie, Uttarakhand (India)

Woodstock School in the Indian Himalayas is one of the most highly esteemed Christian international schools in South Asia. Established in 1854, Woodstock aims to develop responsible global citizens and leaders by providing a world-class international education, rooted in Christian heritage and values, for a diverse group of students, especially those from families in Christian or public services. It provides K-12 instruction, with the residence program starting later in elementary school. Classes follow up through the twelfth grade. Its alumni are active in almost every part of the globe and continue to support the development of this exciting and effective center of learning.

“SPC300 helps a teacher already busy with lesson planning, classroom management, and presentation timing.”

Said Mr. Jeffrey Thomas, Geography teacher, Woodstock School.

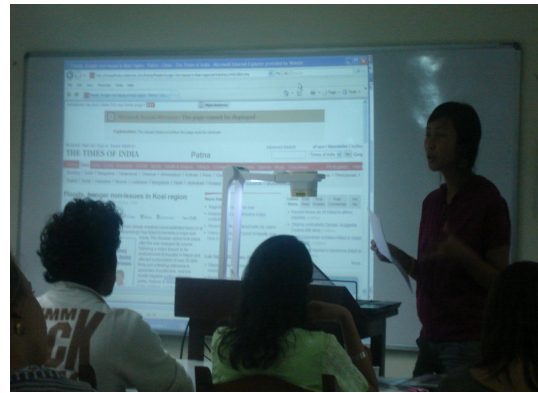

Mr. Thomas said, “The design of the SPC300 makes it very easy to switch between the visualizer and a webpage display. I displayed the webpage and Google Earth while preparing a document, then switched to the document display at just the right moment. Previously, I would have had to convert the document into a jpg file and then find it in my windows folder. With the visualizer available, I can now display images from the textbook and map-book on the fly, depending on the direction of the class discussion. It also gives me an alternative image to display while waiting for Google-Earth or other internet pages to refresh (our internet connection is slow) and yet I can keep an eye on both the camera and computer display sources.”

On being asked about describing the best three benefits of the SPC300, Mr. Thomas replied, “It brings small images to life, quickly and easily; illuminates/projects the textbook, giving it more life; and provides another medium for display (in addition to the computer).”

Case Studies

“Students are fascinated with the AVerVision Visualizer SPC300, especially in how it displays movement.”

Said Mr. Jeffrey Thomas, Geography teacher, Woodstock School.

As for students, having images displayed and enlarged onscreen, rather than having to squint at the actual paper or pass it around is the most useful function of the AVerMedia Visualizer SPC300. Mr. Thomas can easily display small diagrams from the textbook and direct student attention forward rather than see them looking down into their textbook while they discuss particular points.

It is essential for science laboratory teaching, for large arts classrooms, and any subject where demonstration of small-hand practical techniques is required. It is helpful for all teachers who on occasion have to display images from a textbook or handwriting sample, especially to a large class.
