Inquisitive To Learn More With AVerVision300AF

Delhi Private School (DPS), Dubai, with over 7 years of teaching experience, was initially established with the growing need of the multi-cultural community in Dubai. DPS offers CBSE (Central Board of Secondary Education) certification based on the Indian child-centered curriculum, and commits to provide a joyful and hand in hand learning environment with the inculcation of values of integrity, compassion, authenticity, tolerance and leadership.

Teachers at DPS are no strangers to technology having already used interactive whiteboards and projectors. Therefore, when they embraced AVerMedia's AVerVision300AF, no training is required. In science labs, teachers used to present microscopic slides using a microscope with students crowding around it waiting to see the image. But now, by connecting the AVerVision300AF to a microscope, every student in the classroom has excellent view of the microscopic details projected on the screen. By using the Visualizer, tiny objects, insects, plants, leaves, and whatever could be imagined could be magnified several times their original dimensions to get a crystal clear image.

It was a delightful surprise for teachers since it is handy to use. The students are very excited about this new addition into their laboratory and are already using the features to enhance their learning experience. This has also given them a chance to become better presenters for their research projects.

The benefits of using AVerVision300AF are not just for teachers, students are also pleased to have this new learning tool. "Creating a Power Point presentation of my research finding is actually a pain for me... and I can avoid this by just showing them my work using this Visualizer", said Namrata. "It is quite inspiring for doing creative activities... we have a passion to do such creative stuff in future!" Deborah also commented.

The students also find the video recording and image capturing features of AVerVision300AF very useful for showing their assignments and research. "It lets me become inquisitive to learn more and more..." said Lakshana, a student at DPS.

"This device is a big boon for the English department and a very handy tool in the science labs!" Concluded Ms. Shabnam, Head of Computer Department at DPS.

Teacher asked students to present their assignment using AVerVision Visualizer in English class.
