

Case Study

AVerVision SPC300, the New Pain Reliever.

The Hacettepe University, a state university in Turkey, was found in 1967. The university offers several languages of education, including Turkish, English, French and German. There are currently 13 faculties available. The department of Nuclear Engineering is the only department nationwide that offers an undergraduate degree in nuclear engineering.

Since connecting with the AVerVision SPC300, instructors are able to do the presentation in a more efficient way. With the capability of showing much visual materials, courses tend to be more fruitful and presentations become clearer.

Moreover, the Visualizer offers instructors the alternative way of presenting a subject. Writing on the board is avoidable with this new teaching tool. Instructors can prepare course notes in advance and then simply project them on a wall or screen. Materials which are hard to present on the board, such as tables or printed materials are now instantly digitized and easy to present.

With the arrival of the AVerVision SPC300, teachers, especially those suffer from chronic hip pain and receive medical advice not to stand for a long period of time, are able to present all the materials effectively while sitting down. No need to stand, no more aching muscles after long class hours. This has been a big relief for teachers and instructors.

After using, instructors at Hacettepe University exclaim that AVerVision SPC300 is a beneficial, versatile and easy-to-use educational tool for different courses offered in the department.

AVerVision SPC300 has changed the way of teaching at Hacettepe University; teacher can simply sit in a chair and write and the handwriting can be clearly projected live on the board.
