# AVerVision300AF Makes Language Fun to Learn

Ji-Sui Primary School, Taipei, Taiwan, has more than 50 years of teaching experience. The school aims to provide a bilingual environment that enhances English learning for all students. AVerMedia's AVerVision300AF Visualizer has become the teachers' favorite teaching tool in English classes.

### Teach Efficiently

Amy Li, a senior English teacher at Ji-Sui Primary School, used AVerVision300AF to show how to do an exercise on the projected screen step by step. The students can then easily follow these steps to complete their exercises.

She also used the Visualizer to engage the students' attention in class by using the zoom in function to zoom on a particular section in the textbook so that the students can follow her well.

In Writing lessons, instead of drawing lines on the board for the students to fill out the correct answers, Teacher Li simply used AVerVision300AF to capture and project the image of the exercise from the textbook onto the board. This helped her to save the drawing time and allowed her to control the class pace more easily.

### Correct Pronunciation Made Easy

AVerVision300AF makes real-time motion delivery possible. Teacher Li used the Visualizer to make sure students have a closer view of her mouth so that she could show them how to pronounce each English syllables correctly. This allowed the students to learn the techniques of the English pronunciations better than before.

## Case Study

### Eye-Catching Show-and-Tell

In English Story Telling class, students had to make a story booklet and then use it to tell a story. First, Teacher Li used AVerVision300AF to show the class on how to make a story booklet by projecting the making steps on the screen. Students could clearly see each step which made it easy to follow at the same time.

After Teacher Li finished making the booklet, she demonstrated to the class on how to use the booklet under the Visualizer to tell a story. Students then followed her example to perform impressive show-and-tells in class.

For those students who are especially shy to present in front of their classmates, Teacher Li recorded their presentations in advance using the AVerVision Visualizer, so that they could also share their works in class.

With AVerVision300AF, Teacher Li can simply use any 3D materials to teach in class without making extra photocopies, thus efficiently reduced the lesson preparation time. The Visualizer also helped students to stay interested in class and allowed Teacher Li to control class pace more easily. Now the students at Ji-Sui Primary School said they look forward to attend more English classes.
